Research Methodology and Source Base

The research pipeline decomposed the query into 8 tracks and searched each track separately so that the final report would not collapse into a generic overview. Retrieved sources were deduplicated by URL, grouped by track, and then mined for source-grounded evidence sentences. The current run consulted 21 sources across 14 domains, including analyticsinsight.net, bqpsim.com, ibm.com, infinityyieldscript.org, linkedin.com, meegle.com, mitsloan.mit.edu, programming-helper.com.

The synthesis emphasizes triangulation. A claim is treated as stronger when multiple independent domains point in the same direction, when a source provides concrete dates or quantitative evidence, or when it comes from primary documentation. A claim is treated as weaker when it appears only in marketing language, lacks methodology, or projects future outcomes without measurable assumptions.
